

APSMO 2012 Set 1

1 Problems

Problem 1.1 Write the value of this expression as a whole number.

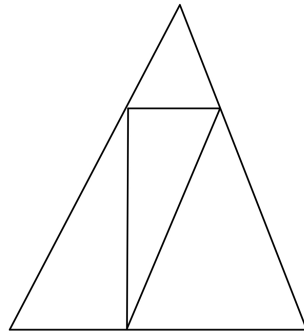

$$(20 + 40 + 60 + 80 + 100 + 120) - (10 + 30 + 50 + 70 + 90 + 110)$$

Problem 1.2 In a group of dogs and their owners, there are exactly 20 heads and 64 legs. How many dogs are in the group?

Problem 1.3 Three friends play a series of 8 games. The winner of each game scores 8 points. Second place scores 3 points. Last place scores 0 points. At the end of the 8 games, Keri's score is 20 points.

In how many of the games did Keri finish last?

Problem 1.4 How many four sided figures can be traced, using lines in this picture?

Problem 1.5 Different letters represent different digits.

If $ADD + ADD + ADD = SUMS$ and A is even, what is the 4 digit number $SUMS$?
